DETAILED ACTION

Priority .

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,500,581 hereinafter White in view of applicant's admitted prior art (AAPA).

White teaches a battery pack module 10, that can be inserting into a housing part of a powered hand tool along a direction of insertion (column 1, lines 40-42, column 2, lines 1-2), having two latching hooks 18 (column 1, line 53), with at least one leaf spring 18S, that biases the latching hooks in the latched position (column 1, lines 46-47),

Art Unit: 1745

which are connected to finger pressure surfaces 18B, said latching mechanism can be moved from a resting position (i.e. latched) to a released position (i.e. unlatched) (column 1, lines 48-50) and both sides of the battery pack are identically assembled to have identical parts which would have the same characteristics and said leaf spring extends over a longitudinal zone of the finger pressure surface 18B (see also abstract, figure 1, column 1, line 12 – column 2, line 67). The Examiner notes that because the spring is biased to a latched position, it would inherently be energetically unstable in a released position, it is also quite clear from the figures that the leaf spring is a substantially thin metal and would therefore be low-damping as defined by applicant in their specification.

White does not teach that the leaf spring is a biconvex leaf spring.

AAPA teaches that it is well known in the art for closure systems to use biconvex shaped leaf springs (paragraph [0003]).

At the time of the invention it would have been obvious to a person having ordinary skill in the art to include a biconvex leaf spring in White as taught by AAPA in order to provide a latching mechanism that would allow for easy operation of the latching mechanism so that the operator can easily remove the battery pack from the power tool without any difficulties that would be related to harder tougher leaf springs.

Application/Control Number: 10/807,893

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert Hodge whose telephone number is (571) 272-2097. The examiner can normally be reached on 8:00am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan can be reached on (571) 272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
